

Think that dusty old laptop is harmless?

It might just be your biggest security threat.

Before you donate or recycle it... read this first.

Old devices aren't junk.

They're full of
**sensitive data - emails,
passwords, client info...**

Even if you *think* you
deleted all of this.

**A simple 'delete' or
'factory reset' doesn't
properly erase your
data.**

**A smart
hacker
could still**

dig it out.

**But protecting
your business is**

EASY.

You just need **the
right steps** before
recycling or donating.

First back up what you need.

Save important files and emails to the cloud or an external drive before doing anything else.

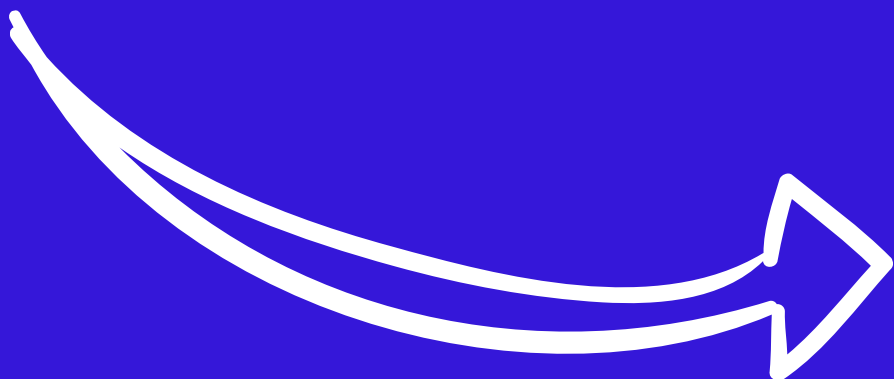

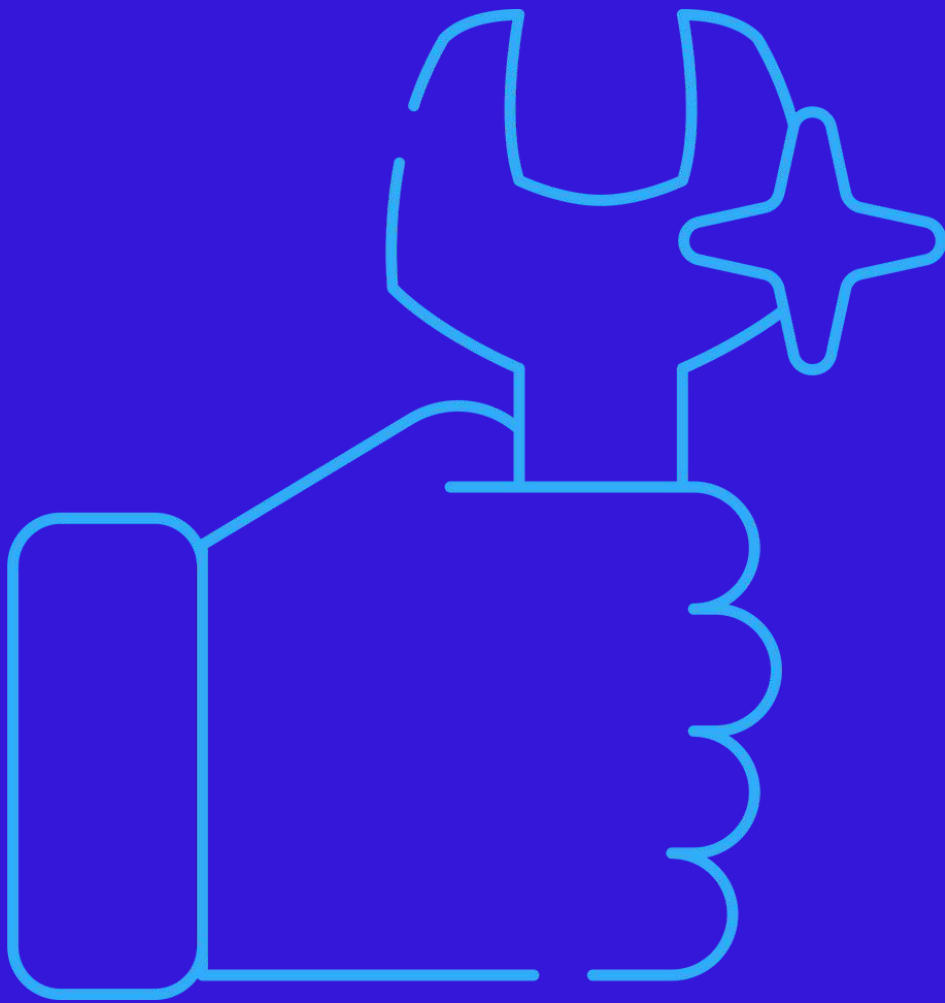

Then use professional data-wiping tools.

Better still, ask your trusted IT support partner to do it for you.

Extra cautious?

Physically remove the hard drive or SSD and destroy it (especially if recycling).

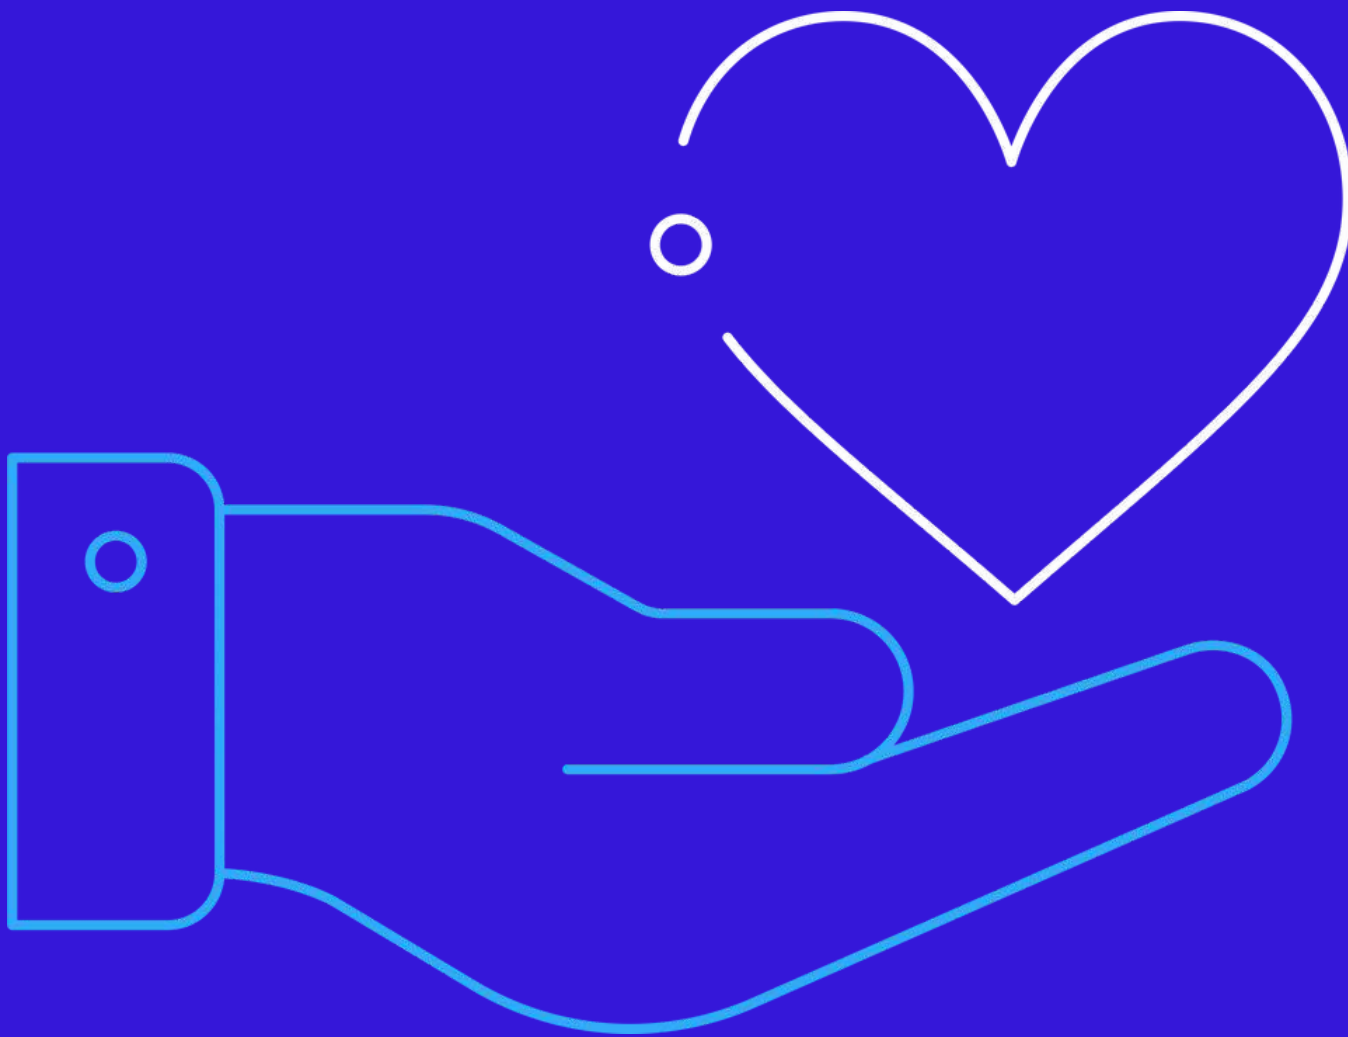

Use a certified recycler.

They follow strict data destruction standards.

Donating to a school or charity?

Make sure the device is fully wiped first – even if they offer to do it for you.

Old phones and tablets are goldmines for data too.

Wipe them properly before handing them over.

One leaked laptop

= a nightmare of lost trust, fines, and embarrassment.

Take 10 extra minutes now to avoid months of regret later.

We can help you
wipe old devices and
keep your private
data private.
