

Out of sight, out of mind?
**Not for
cybercriminals
eyeing your old
devices.**

**Those “retired”
devices could be
hiding your company’s
your
organization’s
biggest cyber
weak spot.**

Even dusty machines can still hold:

- ✕ **Customer / patient / student data**
- ✕ **Saved passwords**
- ✕ **Access to cloud apps**
- ✕ **Sensitive inboxes**
- ✕ **Confidential documents**

Here's the twist...

*Pressing “**delete**”
doesn't make
information vanish..*

**It's more like shoving
boxes into the attic.**

You can't see them, but
anyone who knows the
space can still dig them
out.

And cybercriminals
KNOW that attic
by heart.

They can recover
deleted data in
minutes.

So if an old laptop gets sold, tossed, or recycled without a proper wipe, **you might be giving away:**

- ✕ **Client lists**
- ✕ **Pricing & billing info**
- ✕ **Account logins**
- ✕ **Email histories**

Which can quickly turn into:

✕ **Data breaches**

✕ **Costly Fines**

✕ **Embarrassment**

✕ **Lost of customer trust**

Instead always:

✓ **Back up the info you still need**

✓ **Use professional data-wiping tools (or lean on your IT support partner)**

✓ **Get documented proof of secure disposal**

**Don't let forgotten
laptops be the
reason**

**your
business
ends up in
the
headlines.**

**When you're ready
to securely wipe,
retire, and replace
your old tech,
our team can walk
you through it.**

Take care of it
now...

before someone
else discovers
what's still hiding
on that device..

Get in touch.
