

# STOP SENDING MASS EMAIL FROM YOUR PRIMARY DOMAIN

**PROTECT  
DELIVERABILITY FOR  
THE MESSAGES YOUR  
BUSINESS DEPENDS ON**

# Your domain has a reputation

Every mailbox provider  
tracks how recipients  
react to your email:

- opens
- spam
- bounces
- deletes
- complaints
- unsubscribes

That reputation affects  
future delivery

**THE RISK**

# **ONE Bad Campaign, Many Consequences**

**If a bulk send triggers bounces or spam complaints, your primary domain can start landing in spam.**

**That can disrupt invoices, support replies, HR messages, and vendor email.**

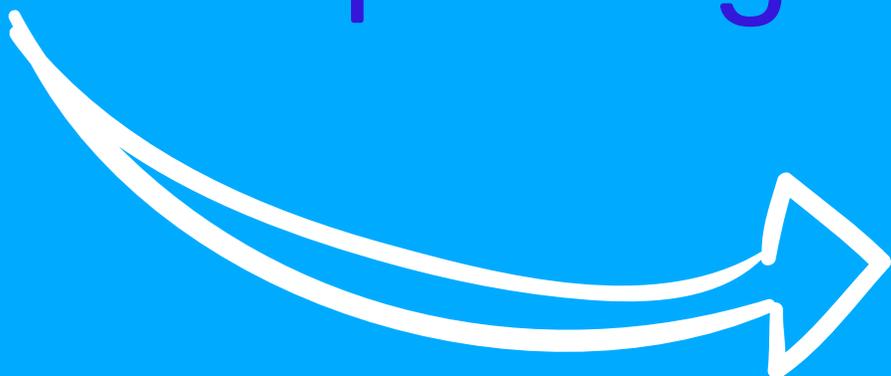

# **Business email is not a bulk engine**

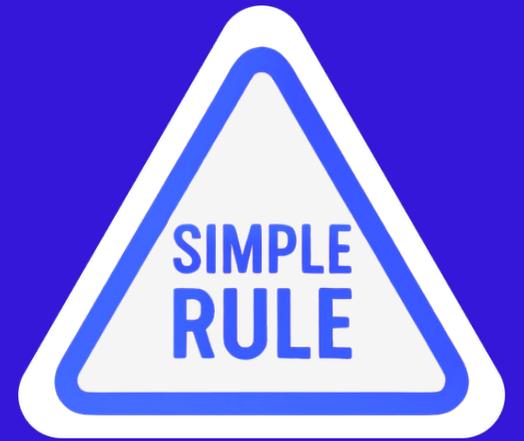

**Microsoft 365 and Google  
Workspace are built for  
everyday communication**

**Mass email needs  
bulk tooling:**

- unsubscribe handling
- bounce tracking
- rate control
- reporting

# Business email is not a bulk engine

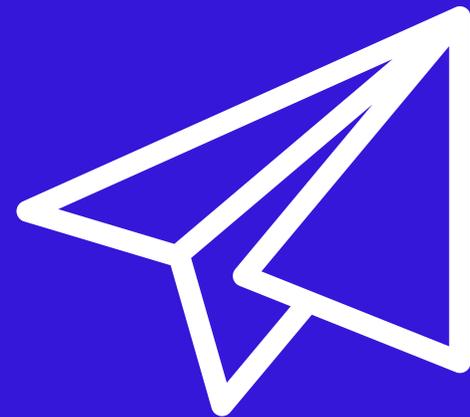

For external mass email:

- 1 Use a dedicated bulk email platform
- 2 Send from a dedicated subdomain
- 3 Authenticate it properly (SPF, DKIM, DMARC)

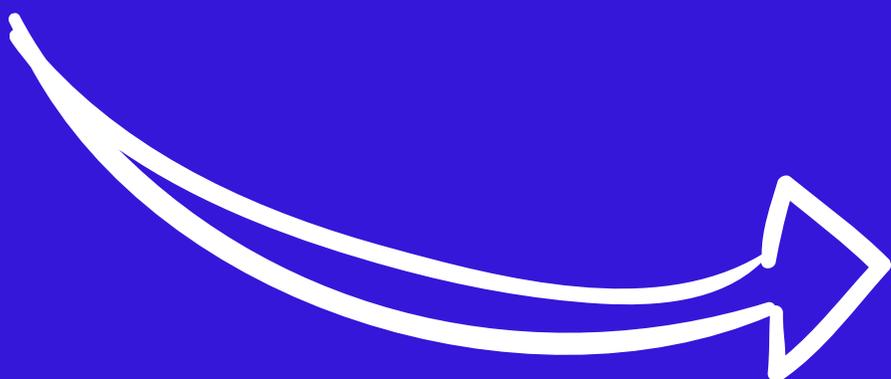

**STEP 1**

# Use a **purpose-built** sending platform

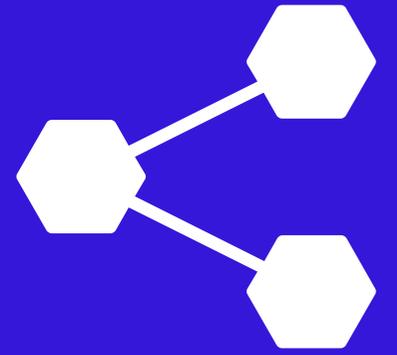

**For external mass email:**

- **List management and segmentation**
- **Automatic unsubscribe handling**
- **Bounce and complaint processing**
- **Deliverability reporting**

## STEP 2

# Use a **dedicated** sending subdomain

## Example:

- **news.yourdomain.com**  
or
- **mail.yourdomain.com**

This helps separate bulk sending from employee mail and reduces reputation spillover

**STEP 3**

# Authenticate like you mean it

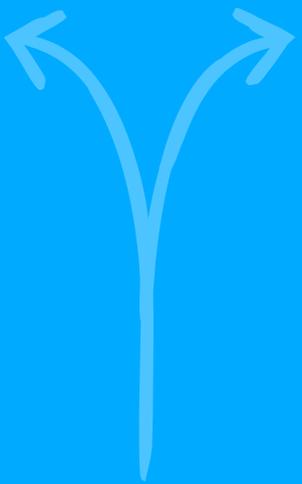

Set up for the sending  
subdomain:

- **SPF (who can send)**
- **DKIM (message integrity)**
- **DMARC (policy + alignment)**

Authentication is table stakes  
for inbox placement and trust.  
reduces reputation spillover

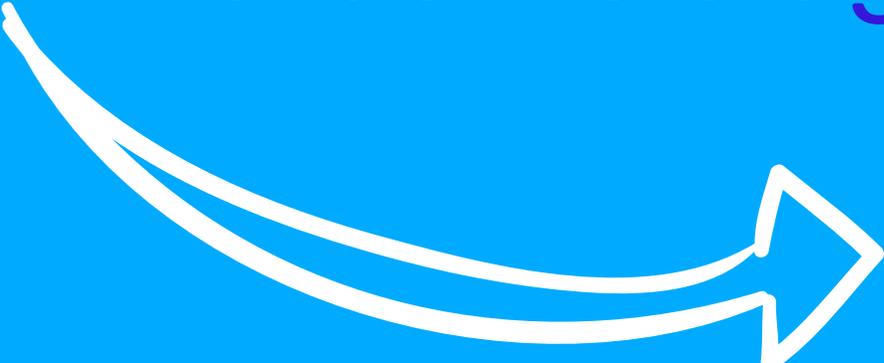

# Separate your mail streams

Keep these distinct whenever possible:

- Employee mail (primary domain)
- Marketing/newsletters (subdomain)
- Transactional mail (often its own subdomain)

Mixing streams makes issues harder to diagnose and fix.

# Warm up volume and keep lists clean

**Bulk deliverability is earned over time.**

- **Start with smaller sends**
- **Remove invalid addresses quickly**
- **Avoid purchased lists**
- **Watch complaint and bounce trends**

# Quick checklist

- ✓ **Dedicated bulk email platform**
- ✓ **Dedicated subdomain for campaigns**
- ✓ **SPF + DKIM + DMARC configured**
- ✓ **Separate marketing vs transactional streams**
- ✓ **Ongoing monitoring and list hygiene**

**Want this set  
up correctly?**

We can configure  
the subdomain,  
authentication, and  
sending platform so your  
primary domain stays  
protected.
